

Powerful cleaner will not damage user or environment

MaxKleen is an all-natural, powder-based, pH neutral industrial cleaning and degreasing solution. Manufacturer Earth Alive, says is not harmful to humans, animals or the environment and is certified NSF Class A1, CFIA, SCAQM, WHMIS, OSHA, HAZMAT SARA Title III, "and too many others to list".

MaxKleen will do what traditionally harmful and dangerous acidic chemicals can do, such as heavy duty degreasing. It can be used on tools, parts, grills, tires, engines, shop equipment and with pressure washers.

The product's ingredients feature a vegetable based substrate which acts as a surfactant and carrier for the proprietary blend of over 30 strains of high performance microbes. The organic surfactant has proven scientifically and in real world applications, to be capable of replacing extreme high and low pH chemicals, including solvents and much more.

The special characteristics of the substrate is that they allow it to effectively clean almost any part or surface, while providing for a remediation of organic materials trapped in surface cracks. Through repetitive applications, an increasing number of microbes are released, allowing for constant reproduction of bacteria and continued digestion of organic materials. MaxKleen is also at home with synthetic oil and grease, as it is with carbon build up on jet engines... where it cleans like dust on a table, and leaving the surface shiny and smooth as it just waxed.

Earth Alive Resources is a leading-edge developer of premium organic based microbial technology for diverse applications in commercial, industrial and institutional janitorial & sanitation, food production facilities, foodservice & hospitality, vehicle wash, agriculture, bioremediation, waste water and sewage treatment industries. Earth Alive is a privately held Canadian-based company, with offices in Canada and the US.

All Earth Alive products are said to meet the LEED-EB (Green Building Rating System for existing buildings, upgrades, operations and maintenance and are also certified by both PETA and the LeapingBunny, as non-testing on animals. They are also hypoallergenic, and will leave skin soft, not dry, as if hand lotion were applied. At any dilution, they will not harm the surface or operator so are safe to use daily for all your cleaning needs. They require cool tap water, not hot, to clean.
